

Amazing Slow Downer

Install Amazing Slow Downer on your computer, so that on your computer, you can listen to a CD recording played slower by any increment, or faster, keeping the same pitch, or changing the pitch as you wish

This helps in hearing and learning to play by listening, especially performances of fast and/or densely textured music that are harder to figure out by ear.

Amazing Slow Downer

www.ronimusic.com

The ronimusic people are in Sweden, and charge just \$45 for the program.

If you use it for only the beginning of a CD, you can use it for free

Amazing Slow Downer is much less expensive than an adjustable speed CD player
